

FOR PROFESSIONAL USE

PRESCRIPTION FOLIARS®

Providing Agronomic Turf Solutions

Prescription Foliars® Soil Penetrant / Soil Wetting Agent

PRESCRIPTION FOLIARS®'s new Soil Penetrant will markedly decrease the water surface tension, thereby increasing soil penetration. Use to reduce irrigation runoff, decrease water waste and increase the intervals between irrigation and fertilizer applications.

RECOMMENDED APPLICATIONS RATES:

FOR GOLF COURSES AND TURF:

Apply 2 – 8 ounces per 1,000 square feet in sufficient water for initial thorough coverage. Continue irrigation schedule as normal. Repeat inoculation of SOIL PENETRANT as needed.

Note: We recommend a miscibility (jar) test before tank mixing.

SHAKE WELL BEFORE USE

FOR GENERAL IRRIGATION:

Hard to wet soils apply 6 – 8 ounces with initial application. SOIL PENETRANT can be injected or metered in during application.
